List of Tables

ascii is a R package for writing asciidoc, txt2tags, reStructuredText, org or textile documents with embeded R code.

1 news

1.1 2010/04/20

- main functions rewritten: it should be easier to add new markup
- add dimnames in `ascii.table()`
- `style`, `align` and `valign` accept matrix
- `t/b/l/rgroup` accept several groups (in a list)
- `header` and `footer` accept an integer (number of lines for the header)
- `t/b/l/rstyle` can be "h" (for "header")
- `caption`, `caption.level`, `align`, `valign`, `style`, `frame`, `grid` have `NULL` default value

1.2 2010/02/05

- textile support
- fix a bug in asciidoc labeled list, when labels begin with a number
- fix bug with RweaveDrivers when split = TRUE

1.3 2009/11/25

- fix several bugs in ascii.freqtable and ascii.meanscomp
- fix several bugs in asciidoc table header

1.4 2009/11/24

- version 0.4
- remove extra `\n` when there is no R output
- change the name of Sphinx related functions to ReST
- add methods for `freq()`, `compmeans()` and `CrossTable()` in package `descr`
- remove `cgroup` and `rgroup` arguments in `ascii()` function
- four new arguments : `tgroup` (top), `bgroup` (bottom), `lgroup` (left) and `rgroup` (right)
- new arguments `escape` and `list.escape` in `print.ascii()` function

1.5 2009/10/28

- "results=ascii" for all drivers
- method for `ftable` objects
- method for `packageDescription` objects
- method for `sessionInfo` objects
- fix warning with asciidoc list output

1.6 2009/10/24

- small bug fix

1.7 2009/10/24

- version 0.3
- `list.type` can be `"label"`
- `ascii.simple.list` method
- `rownames` and `colnames` arguments
- `cgroup` for txt2tags output
- improve col alignment in txt2tags output
- sphinx driver and output
- org driver and output
- improve row and col span (cgroup and rgroup)
- remove `SweaveAscii()` function
- `Asciidoc()`, `T2t()`, `Sphinx()` and `Org()` (wrapper for `Sweave("file.Rnw", RweaveXx-x)`)

1.8 2009/07/16

- version 0.2
- digit and format accept matrix, (each cell can have its own number of digits a nd format)
- new arguments (`cgroup`, `rgroup`, ...) to define major column and row heading s like in Hmisc::latex() (only for asciidoc output)
- column style and alignment use cell specifiers
- remove SweaveSyntaxAscii (bug when `]` is used inside `Sexpr:[]`)

1.9 2009/05/11

- `\SweaveOpts{}` now works
- add `SweaveSyntaxAscii` (`SweaveOpts:[]`, `Sexpr:[]`)
- add a simple wrapper for `Sweave()` (`SweaveAscii()`) that use `RweaveAsciidoc` and `SweaveSyntaxAscii` as default

1.10 2009/04/27

- add a `caption.level` argument
- improve `ascii.describe` output (package `Hmisc`)

1.11 2009/04/08

- update DESCRIPTION (with homepage)
- support for `describe` function in package `Hmisc`

2 short example

```
<<>>=
x <- matrix(1:4, 2, 2)
x
@
```

gives :

```
> x <- matrix(1:4, 2, 2)
> x
     [,1] [,2]
[1,]    1    3
[2,]    2    4
```

```
<<results=ascii,echo=FALSE>>=
ascii(x, caption = "A simple matrix", width = 30)
@
```

gives :

Table 1 A simple matrix

1.00	3.00
2.00	4.00

3 what ascii provides

ascii provided :

- a generic method for common R objects: `ascii()`. Default argument depends of R object,
- several Sweave drivers: `RweaveAsciidoc()`, `RweaveT2t()`, `RweaveReST()`, `RweaveOrg()` and `RweaveTextile()`.
- some simple wrappers for `Sweave("yourfile.Rnw", RweaveXxx)` named `Asciidoc()`, `T2t()`, `ReST()`, `Org()` and `Textile()`.

4 features/options

See `?ascii` for a complete description of all arguments.

	asciidoc	**txt2tags**	**rest**	**org**
Arguments				
include.rownames	yes	yes	yes	yes
include.colnames	yes	yes	yes	yes
rownames	yes	yes	yes	yes
colnames	yes	yes	yes	yes
format	yes	yes	yes	yes
digits	yes	yes	yes	yes
decimal.mark	yes	yes	yes	yes
na.print	yes	yes	yes	yes
caption	yes	yes	yes	yes
caption.level	yes	yes	yes	yes
width	yes	no	no	no
frame	yes	yes (all or none)	no	no
grid	yes	no	no	no

	asciidoc	txt2tags	rest	org
valign	yes	no	no	no
header	yes	yes	yes	yes
footer	yes	yes	no	no
align	yes	yes	no	no
col.width	yes	no	no	no
style	yes	yes	yes	yes
tgroup	yes	yes	yes	no
n.tgroup	yes	yes	yes	no
talign	yes	yes	no	no
tvalign	yes	no	no	no
tstyle	yes	yes	yes	no
bgroup	yes	no	yes	no
n.bgroup	yes	no	yes	no
balign	yes	no	no	no
bvalign	yes	no	no	no
bstyle	yes	no	yes	no
lgroup	yes	no	yes	no
n.lgroup	yes	no	yes	no
lalign	yes	no	no	no
lvalign	yes	no	no	no
lstyle	yes	no	yes	no
rgroup	yes	no	yes	no
n.rgroup	yes	no	yes	no
ralign	yes	no	no	no
rvalign	yes	no	no	no
rstyle	yes	no	yes	no
list.type	yes	yes	yes	yes
condense	yes	yes	yes	yes
Output				
html	yes	yes	yes	yes
docbook	yes	yes	no	yes
latex	yes (experimental)	yes	yes (col and row spans not implemented yet)	yes
Feature				
syntax color	yes (but not for R...)	no	yes	yes

5 ascii examples

ascii provides methods for:

```
> methods(ascii)

Follow those links to see real examples:

- with text2tags
- with reStructuredText
- with org

6 convert

`Sweave` process creates a `yourdocument.xxx` file from `yourdocument.Rnw`.

```
Sweave("youdocument.Rnw", RweaveXxx)
```

You can convert it to html format with the following command:

```
asciidoc yourdocument.txt
or
txt2tags -t html yourdocument.t2t
or
rst2html-highlight --stylesheet-path=pygments-default.css -s rest.rst rest.html
or
Alt-X org-export-as-html
```

or to other formats...

For example, you can see the source of this documentation, the file generated by `Sweave`, the same file in docbook format, the same file converted to pdf with dblatex, and the same file converted to odt with docbook2odf.

7 more informations

asciidoc http://www.methods.co.nz/asciidoc

txt2tags http://txt2tags.sourceforge.net

docutils and reStructuredText http://docutils.sourceforge.net/

org-mode http://orgmode.org/

textile http://textile.thresholdstate.com/

There is another way to create org documents with embedded R code : org-babel. Thanks to Erik Iverson for informing me about org-mode and org-babel.

8 ascii for real

- Derek H. Ogle has written some vignettes for the book 'Analysis and Interpretation of Freshwater Fisheries Data' using `ascii`.
- This blog uses `ascii` and blogpost to generate and publish post.
- This blog too but with another method.
