ascii is a R package for writing asciidoc, txt2tags, sphinx or org documents with embedded R commands.

1 news

1.1 2009/10/24

- version 0.3
- `list.type` can be "label"
- `ascii.simple.list` method
- `rownames` and `colnames` arguments
- `cgroup` for txt2tags output
- improve col alignment in txt2tags output
- **sphinx** driver and output
- **org** driver and output
- improve row and col span (`cgroup` and `rgroup`)
- remove `SweaveAscii()` function
- `Asciidoc()`, `T2t()`, `Sphinx()` and `Org()` (wrapper for `Sweave("file.Rnw", RweaveXx-x)`)

1.2 2009/07/16

- version 0.2
- `digit` and `format` accept matrix, (each cell can have its own number of digits and format)
- new arguments (`cgroup`, `rgroup`, ...) to define major column and row headings like in `Hmisc::latex()` (only for asciidoc output)
- column style and alignment use cell specifiers
- remove `SweaveSyntaxAscii` (bug when `]` is used inside `Sexpr:[]`)

1.3 2009/05/11

- `\SweaveOpts{}` now works
- add `SweaveSyntaxAscii(SweaveOpts:[], Sexpr:[])`
- add a simple wrapper for `Sweave()` (`SweaveAscii()`) that use `RweaveAsciidoc` and `SweaveSyntaxAscii` as default

1.4 2009/04/27

- add a `caption.level` argument
- improve `ascii.describe` output (package `Hmisc`)

1.5 2009/04/08

- update `DESCRIPTION` (with homepage)
- support for `describe` function in package `Hmisc`

2 short example

```
<<>>=
x <- matrix(1:4, 2, 2)
x
@
```

gives :

```
> x <- matrix(1:4, 2, 2)
> x
      [,1] [,2]
[1,]     1     3
[2,]     2     4
```

```
<<results=ascii,echo=FALSE>>=
ascii(x, caption = "A simple matrix", width = 30)
@
```

gives :

Table 1 A simple matrix

| | |
|------|------|
| 1.00 | 3.00 |
| 2.00 | 4.00 |

3 what ascii provides

ascii provided :

- a generic method for common R objects: `ascii()`. Default argument depends of R object,
- several Sweave drivers: `Sweave("yourfile.Rnw", RweaveAsciidoc())`, `Sweave("yourfile.Rnw", RweaveT2t())`, `Sweave("yourfile.Rnw", RweaveSphinx())` and `Sweave("yourfile.Rnw", RweaveOrg())`.
- some simple wrappers for `Sweave()` named `Asciidoc()`, `T2t()`, `Sphinx()` and `Org()`.

4 features/options

See `?ascii` for the description of all arguments.

6 convert

Sweave process creates a `yourdocument.xxx` file from `yourdocument.Rnw`.

```
Sweave("yourdocument.Rnw", RweaveXxx)
```

You can convert it to html format with the following command:

```

asciidoc yourdocument.txt
or
txt2tags -t html yourdocument.t2t
or
sphinx-build -b html . yourdocument # need a conf.py file
or
Alt-X org-export-as-html

```

or to other formats...

For example, you can see the source of [this documentation](#), the file [generated by Sweave](#), the same file in [docbook format](#), the same file [converted to pdf](#) with dbleatex, and the same file [converted to odt](#) with docbook2odf.
