`ascii` is a R package for writing `asciidoc`, `txt2tags`, `reStructuredText` or `org` documents with embedded R code.

1 news

1.1 2009/11/24

- version 0.4
- remove extra `\n` when there is no R output
- change the name of Sphinx related functions to ReST
- add methods for `freq()`, `compmeans()` and `CrossTable()` in package `descr`
- remove `cgroup` and `rgroup` arguments in `ascii()` function
- four new arguments: `tgroup` (top), `bgroup` (bottom), `lgroup` (left) and `rgroup` (right)
- new arguments `escape` and `list.escape` in `print.ascii()` function

1.2 2009/10/28

- "results=ascii" for all drivers
- method for `ftable` objects
- method for `packageDescription` objects
- method for `sessionInfo` objects
- fix warning with `asciidoc` list output

1.3 2009/10/24

- small bug fix

1.4 2009/10/24

- version 0.3
- `list.type` can be "label"
- `ascii.simple.list` method
- `rownames` and `colnames` arguments
- `cgroup` for `txt2tags` output
- improve col alignment in `txt2tags` output
- `sphinx` driver and output
- `org` driver and output
- improve row and col span (`cgroup` and `rgroup`)
- remove `SweaveAscii()` function
- `Asciidoc()`, `T2t()`, `Sphinx()` and `Org()` (wrapper for `Sweave("file.Rnw", RweaveXx-x)`)

1.5 2009/07/16

- version 0.2
- digit and format accept matrix, (each cell can have its own number of digits and format)
- new arguments (`cgroup`, `rgroup`, ...) to define major column and row headings like in `Hmisc::latex()` (only for asciidoc output)
- column style and alignment use cell specifiers
- remove `SweaveSyntaxAscii` (bug when `]` is used inside `Sexpr: []`)

1.6 2009/05/11

- `\SweaveOpts{}` now works
- add `SweaveSyntaxAscii(SweaveOpts:[], Sexpr:[])`
- add a simple wrapper for `Sweave()` (`SweaveAscii()`) that use `RweaveAsciidoc` and `SweaveSyntaxAscii` as default

1.7 2009/04/27

- add a `caption.level` argument
- improve `ascii.describe` output (package `Hmisc`)

1.8 2009/04/08

- update DESCRIPTION (with homepage)
- support for `describe` function in package `Hmisc`

2 short example

```
<<>>=
x <- matrix(1:4, 2, 2)
x
@
```

gives:

```
> x <- matrix(1:4, 2, 2)
> x
      [,1] [,2]
[1,]    1    3
[2,]    2    4
```

```
<<results=ascii,echo=FALSE>>=
ascii(x, caption = "A simple matrix", width = 30)
@
```

gives:

Table 1 A simple matrix

1.00	3.00
2.00	4.00

3 what ascii provides

ascii provided :

- a generic method for common R objects: `ascii()`. Default argument depends of R object,
- several Sweave drivers: `RweaveAsciidoc()`, `RweaveT2t()`, `RweaveReST()` and `RweaveOrg()`.
- some simple wrappers for `Sweave("yourfile.Rnw", RweaveXxx)` named `Asciidoc()`, `T2t()`, `ReST()` and `Org()`.

4 features/options

See `?ascii` for a complete description of all arguments.

```

Follow those links to see real examples:

- [with text2tags](#)
- [with reStructuredText](#)
- [with org](#)

6 convert

Sweave process creates a yourdocument.xxx file from yourdocument.Rnw.

```
Sweave("yourdocument.Rnw", RweaveXxx)
```

You can convert it to html format with the following command:

```
asciidoc yourdocument.txt
or
txt2tags -t html yourdocument.t2t
or
rst2html-highlight --stylesheet-path=pygments-default.css -s rest.rst rest.html
or
Alt-X org-export-as-html
```

or to other formats...

For example, you can see the source of [this documentation](#), the file [generated by Sweave](#), the same file in [docbook format](#), the same file [converted to pdf](#) with dblatex, and the same file [converted to odt](#) with docbook2odf.

7 more informations

asciidoc <http://www.methods.co.nz/asciidoc>

txt2tags <http://txt2tags.sourceforge.net>

docutils and reStructuredText <http://docutils.sourceforge.net/>

org-mode <http://orgmode.org/>

There is another way to create org documents with embedded R code : [org-babel](#). Thanks to [Erik Iverson](#) for informing me about org-mode and org-babel.

8 ascii for real

- Derek H. Ogle has written [some vignettes](#) for the book 'Analysis and Interpretation of Freshwater Fisheries Data' using [ascii](#).
- [This blog](#) uses [ascii](#) and [blogpost](#) to generate and publish post.
- [This blog](#) too but with [another method](#).
